

Animal Health Data Systems Administrator

We are seeking to add a full-time or part-time Animal Health Data Systems Administrator to our growing beef cattle veterinary practice. This position predominantly entails extracting data from various cow-calf and feedlot software programs and leveraging Microsoft tools such as Excel and Access to build dynamic reports and visualize animal health and performance trends. Other duties include troubleshooting hardware/software issues for clients, providing office IT support, and assisting with cattle import/export management. If the successful applicant possesses an AHT or RVT designation, there is more opportunity to assist veterinarians and technicians with other clinical tasks, field research, and pharmaceutical management.

Job requirements:

- Bachelor's degree in agriculture technology, other IT related field, AHT diploma, or relevant work experience.
- A strong work ethic and ability to quickly learn new software and hardware, as well as other agricultural and digital devices.
- Excellent communication skills and ability to work in a team environment.
- A strong interest in agriculture and basic knowledge of the beef production cycle.

Salary and benefits:

Our practice offers a competitive salary with bonuses and profit-sharing structure, mentorship, and full health benefits (full-time positions). Full-time staff are granted 2 weeks vacation and 1-week sick leave. Association dues and continuing education allowances are provided for AHT and RVT professionals.

Application:

Interested candidates should submit a resume/CV and 1-page cover letter to elizabeth@vahs.net
